

Cardioversion of Atrial Fibrillation

Prof. Dr. Andreas Götte, St. Vincenz-Krankenhaus GmbH Paderborn

UNI-MED Science, 1st edition 2011, 112 pp, 109 illustrations, Hardcover, ISBN 978-3-8374-1329-8 (Germany) / ISBN 978-1-84815-182-6 (Rest of the world), Euro 24,80

Cardioversion is one of the most frequently used therapies to terminate atrial fibrillation. Although this treatment form is practised in all parts of the world using the electrical and pharmacological approach, there are only a few specific reviews on the subject. This book summarises the current knowledge and existing guidelines on electrical and pharmacological cardioversion. Practical tips are also included and hence the book is both a treatment manual and a reference work.
