

# **Blood Coagulation and Inflammation in Critical Illness: The Importance of the Protein C Pathway**

*Prof. Dr. Paul Knöbl (Hrsg.), Department of Medicine 1, Medical University of Vienna*

*UNI-MED, 1st edition 2008, 128 Seiten, Hardcover, ISBN 978-3-8374-2035-7, Euro 4,95*

The protein C pathway plays a key role in the pathophysiology of systemic inflammation. Recent developments based on this knowledge resulted in new therapeutic concepts which represent a major breakthrough for the survival of severe illnesses such as sepsis, disseminated intravascular coagulation and purpura fulminans. This textbook provides relevant background knowledge concerning hemostatic mechanisms and summarizes up-to-date, evidence-based therapeutic options. Recent studies and experimental results in this field are critically discussed and an outlook over future indications for protein C is given.
